A: It sounds like you may have run some sort of hard drive repair tool on the disk. If you remember what it was you used, you may want to restore the data from the backups you made. If not, you should be able to recover the data by copying the partition to a new drive. If you don't have any backups (I hope not), or if you lost the data, you'll have to use GPT Partitioning tools. There are some free tools out there, but you're probably better off using Partition Wizard, Partition Assistant, GParted, or similar. Also note, if you need to reformat the disk, you can do it from Windows, or from Linux, both of which will allow you to set up the disk the way it's supposed to be. The process may be a little more painful than some (but not all) of the tools listed above, depending on what drive you're using. Один из наблюдателей президентских выборов в Беларуси пострадал от атаки на штаб-квартиру партии Демократических элементов. Об этом объявил глава штаба Виктор Людвиг. Напомним, накануне сегодня была обнаружена надпись "Ваше количество денег от федерального фонда не превы

Well, it's done. I tried the Windows PE tool. Your instructions were clear, the tool was very user friendly. At the end I used GNU Parted to make the changes to the partition table. Then I ran the diskpart.exe command from the WinPE tool. Using the info provided by the WinPE tool and the diskpart.exe, I was able to format the disk and re-install the PE file. The re-installation was successful. It even came up with all the same info as the one I had tried previously. It is an amazing program and one I highly recommend. 20958824 * s ** 2 / 5 + 3928639298496 * s / 5 - 3928641222496 / 5 = 0 .
