[For many people, this is the first time they have heard of AutoCAD; it is common for new users to think of AutoCAD as just a drawing program and not a CAD package.] In the early 1980s, Autodesk was a small company in San Rafael, California. Autodesk founder John Walker was working on creating a desktop computer version of the company's AutoLISP software application. After some software testing, Walker decided that creating a native application for the new type of PC would be better for the company than attempting to port AutoLISP to the new platform. Autodesk hired a number of consulting engineers and academics to investigate the problem of creating a PC version of AutoLISP. The team settled on an idea of taking the mouse-driven mouse interface of AutoLISP and adapting it for a text-based graphics window. The mouse cursor would be used to place text and graphic objects on a grid of paper. The first version of AutoCAD was not very different from the GUI applications created at the time by other companies such as MacDraw and Maxwell. Originally called Computer Drafting System (CDS), AutoCAD was first released in December 1982 for the Apple II computer. In the 1980s, Apple was an icon of stability and solid financial performance; it had grown from a small company with several hundred employees to a company of over 4,000 employees, with sales of $2 billion in 1983. AutoCAD was Apple's first computer product; its introduction coincided with the announcement that Apple had achieved profitability for the first time. It quickly became the de facto CAD application for use with Apple II computers. The Apple II was Apple's first platform with built-in color display capability, providing a convenient canvas for graphics to be displayed. During the 1980s, a thriving software industry was emerging. Software companies, like Autodesk, created their own software application for sale on their own websites; they would charge a license fee for each copy sold. Most of these applications were published in a format that was easy to print out and then self-assemble into a finished manual, also called a hardcopy. In the 1990s, the burgeoning software industry was producing many new applications, and finding a market for the many new releases was a challenge. Publishing a CAD program as a hardcopy manual was still the easiest way to reach the small market of CAD users, and it was also a

There are many 3rd party CAD software applications that use AutoCAD software for their drawing systems. AutoCAD also supports a third party plugin interface. ObjectARX ObjectARX was a completely different implementation of CAD that was developed by a former AutoDesk engineer. ObjectARX used a completely different architecture from AutoCAD, as its main aim was to support more types of programming languages. ObjectARX was a new implementation of CAD released in 2009. This software was replaced by 2015 release. In the past, ObjectARX was based on Linux and used the CAD API. This implementation used a new API for C++ that was developed internally by Autodesk. The ObjectARX project was a continuation of AutoLISP, a CAD programming language and API used by AutoCAD. ObjectARX was based on a simplified version of the programming language and used a new interface for C++ programming. ObjectARX was based on a completely different architecture to AutoCAD. Products using AutoCAD AutoCAD has been used in a large variety of products, many of which provide advanced features not available in AutoCAD. Engineering HKS, a manufacturer of welding equipment, was one of the first companies to bring the AutoCAD technology to the welding industry. Graphic Design For design software, Autodesk offers products such as: AutoCAD (for commercial usage and by the general public) AutoCAD LT (for non-commercial usage and for students) AutoCAD WS (For web design) AutoCAD Web (for web design) AutoCAD Architect (for architects and interior designers) AutoCAD Civil 3D (for architectural firms and civil engineering) AutoCAD MEP (for manufacturing and design engineers) AutoCAD Mechanical (for mechanical engineers) AutoCAD Electrical (for electrical engineers) AutoCAD Plant (for mechanical and electrical engineers) AutoCAD Electrical & Mechanical (for electrical and mechanical engineers) AutoCAD animation studio AutoCAD Animation Studio is a full-featured 3D animation package for AutoCAD. While the underlying technology is based on the standard AutoCAD technology, the interface is specifically designed to be a standalone application that supports one-on-one collaboration and creation of 3D animations in real-time between users. More particularly, the invention relates to a dental floss dispenser for dispensing lengths of dental floss. Dental floss is used for cleaning interdental spaces between a person"'s teeth. A person can floss a limited amount of interdental space and is thus unable to floss the entire oral area, such as the areas between the person"'s upper and lower teeth, between the person"'s front teeth and back teeth, between the person"'s upper and lower teeth, between the person"'s lower teeth and cheek teeth, and between the person"'s upper and lower teeth. The present invention provides an oral care implement that allows a person to dispense lengths of dental floss from the implement so that the person can floss more of the interdental space. According to the invention, an oral care implement comprises a housing and a dental floss dispenser disposed in the housing. The housing has a base wall and an open mouth that extends between a top wall and an opposing bottom wall. The base wall and bottom wall define an interior space into which dental floss can be dispensed by the dental floss dispenser. The open mouth of the housing is dimensioned to allow a person to insert and remove the dental floss from the housing through the open mouth. A release button is disposed on the top wall of the housing and a resilient member, such as a spring, is mounted on the base wall of the housing. The spring is biased so that the release button is depressed when the spring is depressed. The release button is depressible by a person to dispense dental floss from the housing. In one embodiment of the invention, the dental fl
